## **Bio digesters, Septic's and Sewerage System Construction and Repairs**

If you've ever experienced a problem with your septic tank, cesspit, sewage treatment plant or pumping station, you'll know how disruptive it can be. Fortunately, help is at hand with Moreflow, the experts in domestic and industrial wastewater management.

Problems with wastewater treatment and management systems involve leaks, odors and smells, breakages and cracks, blockages and the release of poor quality water. In Kenya and East Africa, wastewater is usually directed to septic tanks, sewerage systems and bio-digesters. Of these, the septic tank is the most expensive to build and maintain.

Leaks and blockages are some of the most common problems with waste water treatment systems. The difficulty is usually in identifying the location of the leak, the cause of the leak and more even difficult is reaching the leak. At Moreflow enterprises we have advanced techniques to identify and solve any leak problems.

1. Septic Tank, Cesspit and Treatment Plant Inspections and Repairs
2. Tank Installations
3. Blockage removal
4. Sewage Treatment Plant and Pump Station Servicing and Maintenance

## Hazardous / Industrial / Biomedical Waste Management

### Asbestos Management

Asbestos is a naturally occurring mineral composed of soft and flexible fibers that are resistant to heat, electricity and corrosion. These qualities make the mineral useful, but they also make asbestos exposure highly toxic.

Although it was used for decades as an insulator and fire-proofing material, asbestos is now recognized to be a powerful carcinogen. If you have any asbestos -roofed warehouse, residential building, factory or refinery that's being demolished, remodeled, renovated or expanded, you need help from experienced experts to remove the material safely and within established environmental guidelines.

As a leading environmental services organization, Moreflow Enterprises has the knowledge and experience to evaluate your facility's asbestos situation and devise an abatement and removal strategy. Our asbestos removal experts can safely remove all asbestos-containing materials from your property.

*Your waste experts*

---

## Hazardous / Industrial / Biomedical Waste Management

### **Biomedical Waste Management**

Biomedical waste is any kind of waste containing infectious (or potentially infectious) materials e.g. discarded hypodermic needles, disposable scalpels & blades, contaminated glass, syringes, injection needles etc.

As a company capable of handling all of your biomedical needs, we offer unparalleled stewardship for all your regulated waste.

We carry a full line of bio and hazardous waste containers, and offer professional compliance consulting and training services.

*Your waste experts*

---

## Expired Products

We safely and routinely handle expired product collection, transportation and disposal

E.g. expired drugs in Kenya, dispose of expired food in all major supermarkets and items that need to be discarded due to shelf life expiration or damages, expired food stuffs from Go downs and silos.

Our specialists collect, sort, package, manifest, transport and dispose of these consumer products to prevent them from entering the market. If the retail store opts to package the damaged goods themselves, we can provide the packing materials, supplies and containers.

Depending on your product destruction requirements, we can provide landfill disposal for non-hazardous items at a lower cost than incineration. We can also provide cost-effective incineration, fuel blending and aqueous treatment for both hazardous and non-hazardous product destruction.

---

## **Exhauster Services/ Mobile Toilets Services**

At Moreflow Enterprises we have the capabilities to handle all types of sewage and waste water. We provide exhauster services and other services to homes, commercial and public amenities.

Sewer blockages are a common problem. Blocked sewers will be identified by the presence of overflows and bad odor. The overflows are a health hazard because they contaminate the living environment.

---

## Commercial waste Disposal

Commercial waste consists of waste from premises used mainly for the purposes of trade or business. We handle the following commercial wastes

**Brown Waste** – Includes grass cuttings, dry leaves, twigs, hay, paper, sawdust, cardboards etc.

**Construction Waste** – This is unwanted materials produced directly or incidentally by construction e.g. insulation materials, nails, electrical wiring, used iron sheets, tree stumps and rubble.

**Demolition Waste** – This is waste debris from destruction of buildings, roads, bridges etc. Demolition waste includes concrete, wood products, clay, steel etc. We usually dispose these in specially prepared debris landfills.

*Your waste experts*

---

## Commercial waste Disposal

### **E – Waste**

Currently it is estimated that Kenya is generating about 51.3k tons of e-waste annually.

The National Environment Management Authority (NEMA) describes e-waste as “discarded electrical or electronic devices or appliances that have ceased to be of any value to their owners.”

Increase in the availability of e-waste in the coming few years since technology is changing fast and calls for a need to sensitize Kenyans on how to manage these wastes.

We carefully manage and properly dispose of discarded electrical or electronic devices

*Your waste experts*
